Dual Parameter Flow Monitor and Transmitter

# FLS M9.03

The FLS M9.03 dual-parameter flow monitor is a powerful device that converts the frequency signal of the flow sensors into flowrate. The M9.03 monitor is equipped with a large 4" graphic display which shows measured values clearly and a lot of other useful information. Moreover, due to a multicolour display plus a powerful backlight, measurement status can be determined easily from afar too. A tutorial software guarantees a mistake-proof and fast set up of every parameter. Calibration can be performed by indicating the installation features or using a reference value through a new "in-line calibration". Two 4-20 mA outputs are available to communicate the flow rate to an external remote device. Appropriate combination of digital outputs allows customised setups for any process to be controlled. The USB port on the back allows you to update the software with a wide range of customisation services as standard and on-demand.
